IDENTIFIERS	*Common Core of Data Program; *Large School Districts; United States

ABSTRACT

Basic descriptive information is provided about the 100 largest school districts in the United States and its outlying areas during the 1990-91 school year. The 100 largest public school districts, representing fewer than 1 percent of all school districts, were responsible for educating 23 percent of all public school students. Characteristics that are noted include average and medium size, student-teacher ratios, number of high school graduates, numbers of pupils receiving special education, and minority enrollment as a proportion of total enrollment. This information is contained in nine basic tables. Almost all of these districts encompass large cities, but only about half are confined to city limits. About 70 percent are in coastal states, and of the 89 districts for which student racial/ethnic information was reported, 47 districts have over 50 percent minority enrollment. The 100 districts employ about 23 percent of the nation's public school teachers and accounted for about 17 percent of all public schools and over 19 percent of public high school graduates. Schools in these districts tended to be 39 percent larger than the average U.S. school and to have a slightly higher pupil/teacher ratio than those in other districts. The nine basic tables and the three tables listing selected statistics present data collected by the National Center for Education Statistics for the Common Core of Data. One figure illustrates the location of these districts. Three appendixes list the largest districts and contain the survey documents for the elementary school and secondary school universes and the school agency universe. (SLD)

Highlights

Information collected by the National Center for Education Statistics for the Common Core of Data, relating to public schools and school districts in the United States and outlying areas, indicates that during the 1990–91 school year

- The 100 largest public school districts, representing fewer than 1 percent of all school districts in the nation, were responsible for the education of about 23 percent of all public school students;
- Although almost all of these districts encompassed large cities, only about half of the school districts were confined to the city limits;
- About 70 percent of these districts were located in coastal states;
- Of the 89 districts for which student racial/ethnic information was reported, more than half (47) had over 50 percent minority enrollment. However, in 22 of the 89 districts, no single racial/ethnic group comprised a majority of the student population;
- Schools in the 100 largest districts tended to be about 39 percent larger than the average American school and to have a slightly higher pupil/teacher ratio than those in other school districts; and
- The 100 largest districts employed about 23 percent of the nation's public school teachers, and accounted for about 17 percent of all public schools and over 19 percent of public high school graduates.

Introduction

This publication provides basic descriptive information about the 100 largest school districts in the United States and its outlying areas. Almost one in every four public school students in this nation is served by one of these largest districts, which are distinguished from smaller districts by differences in several other characteristics in addition to sheer size. The characteristics that are noted in this report include average and median school size, pupil/teacher ratios, number of high school graduates, number of pupils receiving special education services, and minority enrollment as a proportion of total enrollment. This information is found in the nine basic tables. Preceding the basic tables are text tables for the purpose of establishing a meaningful context for the information on the 100 largest districts. Following the basic tables, appendix A lists the 500 largest school districts with some identifying information and basic statistical data. Appendices B and C are facsimiles of the data collection instruments used in the Common Core of Data surveys. The information presented in the basic tables comes from the responses to these surveys.

In the 1990–91 school year there were 16,699 local education agencies in the United States and its outlying areas, 15,363 of which were categorized as "regular school districts." (The others were a variety of agencies providing specialized or cooperative educational services.) The 100 largest districts were chosen for attention in this report because they serve such a substantial percentage of our nation's school-age youth and because their size and other characteristics set them apart from the other 16,000 plus public school districts in the country.

This is the fourth in the current series of reports on the largest school districts in the nation. Previously published were *Characteristics of the 25 Most Populous Cities' School Systems and the 25 Largest Public Elementary and Secondary School Districts: Fall 1986*, released in September 1988; *Characteristics of the 55 Largest Public Elementary and Secondary School Districts in the United States: 1987–88*, published in May 1989; and *Characteristics of the 100 Largest Public Elementary and Secondary School Districts in the United States: 1988–89*, published in April 1991. The latter report may be ordered from OERI's Education Information Branch by telephone, toll-free, on 1–800–424–1616. This year's report is the first in the series to include the Puerto Rico Department of Education in the tables rather than only in the appendix.

The 100 largest school districts serve 9,627,140 students, or about 23 percent of the total public elementary and secondary school population of over 42 million students in the more than 16,000 local education agencies (LEAs) in the nation (see table A). The largest school district in the country is New York City Public Schools, with 943,969 students in 1,000 schools. The second largest is the Puerto Rico Department of Education, with 644,734 students in 1,619 schools. Los Angeles Unified School District, with 625,073 students in 632 schools, is third in size (see table 1). The 500 largest districts (about 3 percent of all school districts) serve 17,658,426 students, or about 42 percent of the total public elementary and secondary school student population in the United States (see table A).

Table A.--Totals of selected statistics for the nation, the 100 largest, and the 500 largest school districts: School year 1990-91

Data item	National total	100 largest districts		500 largest districts	
		Total	Percentage of national total	Total	Percentage of national total
Districts	16,699	100	0.6	500	3.0
Schools	86,281	14,206	16.5	26,806	31.1
Students	42,095,467	9,627,140	22.9	17,658,426	41.9
Teachers	2,282,398	514,737	22.6	930,054	40.7
Graduates	2,277,010	441,664	19.4	850,934	37.4
Pupil/teacher ratio	18	19	NA	19	NA
Graduates as percentage of all students	5.4	4.6	NA	4.8	NA

Note: Data for outlying areas are included in the national totals.

Source: U.S. Department of Education, National Center for Education Statistics, Common Common Core of Data, "Public Elementary and Secondary School and Education Agency Universes." No imputations were made for missing data on teachers (Massachusetts and Michigan), or graduates (Michigan and Washington), which were not supplied by state CCD coordinators. Minority data from Office for Civil Rights, US Department of Education.

For a more comprehensive picture of the distribution of school districts of all sizes nationally, and the number of students served, see table B or consult the related data sources listed at the end of the text.

Where Are the 100 Largest School Districts?

The District of Columbia, Hawaii, and Puerto Rico each have only one school district for the entire jurisdiction, and each is represented among the 100 largest districts. Alaska, Illinois, Indiana, Kansas, Kentucky, Massachusetts, Michigan, Minnesota, Missouri, Nebraska, Nevada, New Jersey, New Mexico, Oklahoma, Oregon, Washington, and Wisconsin each have one district among the 100 largest.

States with multiple districts among the 100 largest are Florida and Texas with 13 each; California with 10; Georgia and Maryland with 5 each; Louisiana, Ohio, and Virginia with 4 each; Alabama, North Carolina, Tennessee, and Utah with 3 each; and Arizona, Colorado, New York, Pennsylvania, and South Carolina with 2 each.

As expected, these 100 school districts tend to be in cities and counties having large populations, with administrative offices typically in large cities and their environs. Many of the districts are in states where school districts are coterminous with counties. The district names indicate that 49 of them are identified with cities, 42 with counties or parishes, and 9 with other jurisdictions. About 70 percent of these districts are located in coastal states, although several are located in the large cities of the north central states.

Table B.--Number and percentage of districts and students by district membership size for regular public elementary and secondary school districts: School year 1990-91

District membership size	Districts			Students			Cumulative totals	
	Number	Percentage	Cumulative percentage	Number	Percentage	Cumulative percentage	Districts	Students

How Do These Districts Compare With the Average School District?

General Characteristics

According to information submitted to the National Center for Education Statistics (NCES) by education officials in state education agencies, the average school district in America has about 5 schools, 137 teachers, and 2,521 students, with an average school size of about 488 students and a mean pupil/teacher ratio of about 18 to 1. Among the 100 largest districts, the means are 142 schools, 5,147 teachers, and 96,271 students, yielding an average school size of about 678, and a pupil/teacher ratio of 19 to 1.

Nationally, the number of high school graduates per year as a percentage of total school membership is about 5.4 percent. For the 100 largest school districts the average is about 4.6 percent (see table A).

Student Body Composition

A substantial number of these districts have a disproportionately high percentage of racial/ethnic minorities in their pupil population compared with the average school district. Using school district data from the Office for Civil Rights, NCES estimates that the 100 largest districts, with about 23 percent of the nation's pupils, have slightly more than 40 percent of the 12.2 million minority students in the country.*

Among those 89 of the 100 largest districts for which school-level student racial/ethnic data are reported in CCD, some 43 districts report 50 percent or more of their students as white, non-Hispanic. Of these 43 districts, 15 report minority representation of less than 25 percent of their student body, and 10 of them have less than 20 percent minority students.

In 19 districts, half or more of the membership is black, non-Hispanic; 6 districts report that the majority of their students are Hispanic; and in one district, most of the students are Asian/Pacific Islanders. In 20 districts, no single racial/ethnic group comprises more than 50 percent of the student population.

---

* The number of students in different racial/ethnic categories are reported on the school universe survey of the Common Core of Data (CCD), and these school-level numbers are then aggregated to the school district level. Although there were sufficient school-level data to be able to calculate student racial/ethnic enrollment figures for 89 of the 100 largest school districts, reporting from schools in other districts was not complete enough to calculate national distributions. National racial/ethnic data are, therefore, taken from the most currently available (fall, 1988) Office for Civil Rights report. These data show a national estimate of the total number of minority students in all the public school districts (12.2 million) and the *percentage* of minority students in each of the 100 largest districts. Applying these percentages to the reported membership figures for the 100 largest school districts and the total national public school membership (as reported to NCES in the Common Core of Data), NCES calculated the *number* of minority students in each school district and added these figures to estimate the total minority membership for the 100 largest districts. This total was divided by national public school membership to get a percentage of minority students in the 100 largest districts compared with all minority students in the Nation's public schools.

Membership Trends

The largest school districts in the United States have for the most part remained relatively stable in size over the past 5 years, although there are some exceptions. When 1990–91 membership is compared with that of 1986–87 (see table C)

- The 20 largest districts, in both years, have accounted for approximately 12 percent of the students in the nation's public elementary and secondary schools. In the fall of 1986, these 20 districts enrolled 4,850,406 pupils out of a national total (including outlying areas) of 40,499,050. In 1990–91, they had 4,961,218 students out of 42,095,467.

- One district, Palm Beach County, Florida, has displaced Jefferson County (Louisville), Kentucky, from the list of the 20 largest districts by moving from its 1986–87 position as 25th in size to 20th in 1990–91. Two other large districts in Florida, Dade County and Broward County, have also shown noteworthy increases, as has Clark County, Nevada.

- Many of the districts serving large cities have experienced some losses, with Detroit, Memphis, and Chicago registering the sharpest declines in proportion to their size. Puerto Rico, not a city district, shows a 5.1 percent loss over the 5-year period, as well.

Table C.--Membership trends in the 20 largest school districts in the United States: School years 1986-87 to 1990-91

1990 Rank by size	Name of reporting district	State	1986 Rank by size	1990 membership	1986 membership	Change: 1986 to 1990	Percentage Change: 1986 to 1990

SOURCE: U.S. Department of Education, National Center for Education Statistics, Common Core of Data, "Public Elementary and Secondary Education Agency Universe."

Methodology

The primary source of data for this report is the 1990–91 Common Core of Data (CCD). Information was reported to NCES by state education agencies in the spring of 1991. There are four CCD surveys collecting basic descriptive data on public education in the nation: nonfiscal data are gathered through the school ("Public Elementary/Secondary School Universe" survey), local education agency ("Public Elementary/Secondary Education Agency Universe" survey), and state forms ("State Nonfiscal Survey"); fiscal data are gathered at the state level only. The information for the tables is taken from the school and local education agency collections. All responses are provided by a CCD coordinator in each state education agency. Since the information is supplied by state education agencies, any item of data missing for one school district is generally missing for other districts in the same state. For the calculation of national or subnational averages, data were obtained from the "State Nonfiscal Survey." Wherever this alternative source has been used, the information is footnoted or explained in the text.

Response Rates

Notwithstanding the item nonresponse situations cited below, most of these data represent school district-level figures from all 50 states, the District of Columbia, and five outlying areas: American Samoa, Guam, Commonwealth of the Northern Marianas, Puerto Rico, and the Virgin Islands.

Item Nonresponse

The following nonresponse situations in the CCD school and agency universe surveys relate to information presented in this report: No teacher counts—Massachusetts and Michigan; no high school graduate counts—Michigan and Washington; no racial/ethnic counts—Georgia, Missouri, Virginia, and Puerto Rico; no special education Individual Education Plan counts (or zero entered in every record)—Kansas, Kentucky, Ohio, Oklahoma, Pennsylvania, Vermont, and Washington.

Definitions

Graduates—Students who completed the course of public elementary and secondary education offered by the school district and who received a regular high school diploma as defined by state law or policy during the period September 1989 through August 1990.

Pupil/teacher ratio—The ratio of pupils to teachers in the school district, based on the total number of pupils and the total full-time-equivalent (FTE) number of teachers reported in the schools associated with the school district.

Public school—An institution which provides educational services and has the following characteristics:

- Has one or more grade groups (prekindergarten through grade 12) or is ungraded;
- Has one or more teachers to give instruction;
- Is located in one or more buildings or sites;
- Has an assigned administrator;
- Receives public funds as primary support; and
- Is operated by an education agency.

Pupils in membership—Count of all students whose names have been entered on the roll during a given school year, minus those whose names have been withdrawn on or before the closest school day to October 1. Membership counts at the district level may include students for whom the district is providing educational services through some other agency or institution.

Schools having membership—Schools at which students are counted for administrative purposes, even though the students may attend one or more other schools for all or part of their school day.

Teachers—Sum of full-time-equivalent (FTE) count of teachers by school for all schools in a school district.

Acknowledgments

The author gratefully acknowledges the comments and suggestions of the reviewers: Mark Root of the Council of Great City Schools; Howard Nelson of the American Federation of Teachers; Fred Beamer of the OERI Public Information Division; and Douglas Wright, Marilyn McMillen, MacKnight Black, Laurence Ogle, and Tongsoo Song of the National Center for Education Statistics. Special thanks are due to Valerie Martin and Carol Rohr of Pinkerton Computer Consultants for the creation and production of the tables and the graphic figures.

Basic Tables

Table 1 presents basic data—numbers of students, teachers, graduates, and schools—for each of the 100 largest districts. Also shown in table 1 is information to fully identify each school district, since the name of the district is not always sufficient for this purpose. On this and all the other tables, the districts are shown in order of size (pupils in membership as of October 1990). Since the districts are arrayed by number of pupils, it is easy to note the differences in the numbers of teachers, graduates, and schools as they relate to districts of similar size. For example, although the Hawaii Department of Education has fewer students than the Broward County School District, it has more teachers and graduates. Fairfax County, Virginia, Public Schools, though smaller in size than the Dallas Independent School District, has more graduates.

Table 2 shows the number of schools in the 100 largest districts, by type of school. All but five of the districts have specialized schools devoted to special, vocational, or alternative education. The numbers of students assigned to these schools are given on **table 3**. It should be noted that students attending a specialized school are often counted at their (regular) home school rather than at the specialized school they attend. It can be seen from these tables that districts vary widely in their use of specialized versus general schools in educating students with special needs. The number of students having Individual Education Plans (IEP) in accordance with the Individuals with Disabilities Education Act-Part B is shown in the last column of table 3.

Since pupil membership by grade is necessary for determining school categories in tables 4 through 9, only schools having membership, or "regular" schools having membership, as specified in the table, are used in the data sets from which these tables are derived.

Table 4 provides information on school characteristics in the 100 districts by displaying an array showing school size (pupils in membership) at different percentile levels, as well as *mean* school size for each district (computed using regular schools having membership). According to this table, *median* school sizes range from a low of 313 pupils (St. Louis City) to a high of 1,070 (Gwinnett County, Georgia) for these districts. The largest school in these districts, and also the largest school in the United States, is the 4,591 student John F. Kennedy High School in the New York City Public Schools. Looking more closely at New York City, the table shows that 25 percent of the schools have a pupil membership of 595 or less, and another 25 percent have a membership of 1,115 or more. Dividing all the students in regular schools by the number of such schools yields a *mean*, or *average*, size of 972.1 students. If all the regular schools in New York were listed by size, the school at the mid-point on the list would have 807 pupils in membership. The *median*, therefore, is 807.

In **table 5**, data are given on the number of students assigned to graded (three categories) and ungraded classes. In accounting for their students, 47 of the 100 largest districts assign all students to numbered grades and 53 use the "ungraded" status for students in some settings, such as special education, vocational education, and other specialized and alternative

programs. In this table, students assigned to all types of schools are counted in the grade for which they are reported.

People frequently want to know how many "elementary schools" and "high schools" there are in any selection of school districts. **Table 6** deals with these questions. Since nearly every conceivable grade span is found among the nearly 14,000 schools in the 100 largest districts, the following four categories are used: primary (low grade of prekindergarten to 3; high grade up to 8), middle (low grade 4 to 7; high grade 4 to 9), high (low grade 7 to 12; high grade 12), and other (all other configurations). Although 88 of these school districts have some schools in the "other" category, only in the Puerto Rico school system is the *number* very high (223 or 14.0 percent). Several districts that have fewer pupils than Puerto Rico, however, have higher *percentages* of schools in this category. Districts in this group are Hillsborough County, Florida (16.1 percent), Northside ISD, Texas (20.3 percent), Volusia County, Florida (17.5 percent), and Jefferson County, Alabama (18.3 percent). The school counts in tables 6 through 10 include only schools having regularly assigned membership.

Table 7 shows median pupil/teacher ratios for the schools found in the categories established in table 6. Since teacher counts by school were not available for Detroit or Boston, no pupil/teacher ratio could be calculated for the schools in these districts. Among the 100 largest districts, the median pupil/teacher ratio for all schools in a district varied from 14.7 in Newark, New Jersey, to 26.8 in Santa Ana, California.

Table 8 gives the number of schools in each district in five percentage categories of minority concentration, as well as the overall minority student percentage for each district as a whole. In this report, minority is defined as all other than white non-Hispanic. Among the 20 largest districts, it is not uncommon to have two-thirds or more of the schools with more than 60 percent minority membership. Racial/ethnic data by school were not available for the school districts in Georgia, Missouri, Virginia, and Puerto Rico.

Whereas table 8 dealt with the number of schools in each district having a strong minority presence of any kind, **table 9** shows the percentage of students in the entire district by specific racial/ethnic category. As in table 8, racial/ethnic data were not available for districts in some states. Table 9 also shows the number of students eligible for free lunch. Responses in this data category were available for only 47 districts in 17 states, the District of Columbia, and Puerto Rico. Among these districts, the percentage of students eligible for free lunch under a Federal program range from 4.8 (Gwinnett County, Georgia) to 85.5 percent (Puerto Rico).
